TABLE OF CONTENT

INTRODUCTION

TripWise is an AI-powered travel planner designed to make trip planning simpler, smarter, and stress-free. Whether you're planning a solo adventure, a family vacation, or a work trip, TripWise helps you organize everything in one place—from choosing destinations to managing your itinerary and budget.

OBJECTIVES

AI-Powered Itinerary Planner

Generate optimized travel plans tailored to user preferences.

Smart Destination or Place

Suggestions – Provide recommendations based on interests, season, and location.

Budget Tracker

Help users plan and monitor trip expenses efficiently.

PROBLEM

Currently, planning a trip requires using multiple platforms, making the process time-consuming and inefficient:

Itinerary Planning – Users have to visit one platform or manually create an itinerary.

Destination & Place Suggestions – Users need to Google multiple sources to find recommendations.

Expense Tracking – Users have to download a separate app to track and manage trip expenses.

This scattered approach is frustrating, inefficient, and lacks personalization.

SOLUTION

TripWise eliminates the hassle by combining everything in one AI-powered platform:

AI Itinerary Planner – Auto-generates customized trip schedules.

Smart Place Suggestions – Provides AI-driven recommendations in one place.

Budget Tracker – Manages expenses directly within the app.

A seamless, stress-free, and highly personalized travel planning experience in just a few clicks!

INNOVATION

- Connect users traveling to the same destination. Enable them to join shared activities, group tours, or split costs (e.g., for transportation)
- Smart Packing Assistant which Generate personalized packing lists based on destination, trip length, and activities. Include weather predictions to suggest items (e.g., raincoat or sunscreen).
- AI-Driven Trip Comparisons which Allow users to compare different trip plans side-by-side based on cost, duration, activities, or user preferences.
- AI-Driven Budget Optimizer which Dynamically allocate user budgets between flights, accommodations, activities, and food for maximum value.

FUNCTIONAL REQUIREMENTS

AI-POWERED ITINERARY PLANNER

GENERATE CUSTOM ITINERARIES BASED ON USER INPUT.

DESTINATION & PLACE SUGGESTIONS

RECOMMEND LOCATIONS BASED ON PREFERENCES.

BUDGET TRACKER

ALLOW USERS TO SET AND TRACK EXPENSES.

TRIP MANAGEMENT

SAVE, EDIT, AND SHARE ITINERARIES.

SEARCH & FILTERS

HELP USERS FIND DESTINATIONS AND ACTIVITIES EASILY.

INTERACTIVE UI

PROVIDE A SEAMLESS, USER-FRIENDLY EXPERIENCE.

NON-FUNCTIONAL REQUIREMENTS

PERFORMANCE

Ensure fast response times for AI suggestions and itinerary generation.

RESPONSIVENESS

Work smoothly on mobile, tablet, and desktop.

SECURITY

Encrypt user data and implement secure authentication.

UI/UX AESTHETICS

Provide an intuitive and visually appealing interface.

TECHNOLOGY STACK

FLOWCHART

TIMELINE

TEAM ROLE

23DCE066–Sarvak Makani

UI/UX Designing

Frontend Development (React.js, Tailwind CSS)

23DCE076– Aryan Patel

Backend Development (Node.js, Express.js)

API Development & Integration

23DCE077–Bhargav Patel

Database Management (MongoDB)

Unit Testing

LIMITATION

- Dependency on External APIs
- No Direct Booking Features
- Misjudging Time Management
- Difficulty Accounting for Unexpected Closures
